Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a production plant with a collection computer which acts as a server, a first communication network for transmitting information packages asynchronously from the control units to collection computer, and the collection computer organizes the packages of information and acts as a server over the second information network. classified in class 700, subclass 95.
 - II. Claims 12-17, drawn to a production plant in which a collection computer is able to transfer updated management and configuration parameters to a control unit, classified in class 700, subclass 96.
 - III. Claims 18-21, drawn to a production plant in which a collection computer collects data from control units and reports important events by electronic mail messages to a group of users, classified in class 700, subclass 108.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in a plant in which the control units are not programmable or have fixed programming. See MPEP § 806.05(d).
3. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are

shown to be separately usable. In the instant case, invention I has separate utility such as in a plant in which if an important event occurs a light is generated or a buzzer sounds. See MPEP § 806.05(d).

4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as in a plant in which the control units are not programmable or have fixed programming. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper. Group I would require a search of class 709 subclass 200+ for server details not required for Groups II and III.

7. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Groups I and III, restriction for examination purposes as indicated is proper. Group II would require a search of class 713 subclass 100+ for reconfiguring details not required for Groups I and III.

8. A telephone call was made to Mr. Evans on 6/21/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven R Garland whose telephone number is 703-305-9759. The examiner can normally be reached on Monday-Thursday from 6:30 to 5:00.
